1. (amended)	A method, executed b	y a node on a n	etwork, of trans	mitting iden
tifying information abo	out the node, the metho	d comprising:	,	

- (a) determining a current [node identifier] NIC address value;
- (b) retrieving, from a data storage at the node, a former [node identifier] NIC address value for the node; and
- (c) transmitting the current [node identifier] <u>NIC address</u> value and the former [node identifier] <u>NIC address</u> value.
  - 2. (amended) The method of claim 1, wherein [(1) the value of the node identifier for any particular node in the network is dependent on one or more node-identification attributes of that node, and (2) ] determining the current node identifier value includes an attempt to detect the then-current NIC address value. [values of said one or more node-identification attributes.]
- 3. (amended) The method of claim 2, wherein the attempt to detect the thencurrent NIC address value [said one or more node-identification attributes fails to detect at least one
  of said node-identification attributes] is unsuccessful, and further comprising (i) retrieving,
  from a data storage at the node, a stored value containing the result of a past live detection of the then-current NIC address value, [said one or more node-identification attributes,] referred to as a previously-detected [node identifier] NIC address value; and (ii) transmitting
  the previously-detected [node identifier] NIC address value.

## 4. (canceled)

1 (amended) The method of [claim 4] claim 1, wherein the NIC address value comprises a signature portion and a pseudorandomly generated portion.

PAGE 2

1	5 % (amended) The method of claim 1, wherein the former [node identifier] NIC ad-
2	dress value is redundantly stored in multiple partitions within the data storage at the node.
1	(amended) The method of claim 6, wherein (x) each copy of the former [node
2	identifier] NIC address value is associated with a timestamp, and (y) retrieving the former
3	[node identifier] NIC address value comprises retrieving the respective copy associated with
4	the most recent timestamp.
ر مر	\$\frac{1}{2} \rightarrow \righ
1	8. (amended) A method, executed by a server node on a network, for recording,
2	in a database, information about a client node, comprising:
3	(a) receiving information from the client node, said information including
4	node-identification information for the client node that includes (i) a current [node-
5	identifier] NIC address value, and (ii) a former [node-identifier] NIC address value; and
6	(b) storing, in a record in the database associated with the node-
7	identification information, the current node-identifier value and the former node-identifier
8	value.
1	(9. (canceled))
	8 7
1	10. (amended) The method of [claim 9] claim 8, wherein the NIC address value
2	comprises a signature portion and a pseudorandomly generated portion.
٠,	
3	- 7
$^{\prime\prime}$	11. (amended) A program storage device readable by a processor in the node of
1/2	a specified one of claims 1 through 3, 5 through 7, and 21 through 23, and encoding a

3	program of instructions including instructions for performing the operations recited in the
4	specified claim.
1	12. A program storage device readable by a processor in the server node of a
2	specified one of claims 8 [through] and program of instructions includ-
3	ing instructions for performing the operations recited in said specified claim.
1	13. (amended) In a node on a network, a data store comprising a machine-
2	readable data structure accessible to a processor in the node and containing node-
3	identification information for the client node that includes (i) a current [node identifier] NIC
4	address value, and (ii) a former [node identifier] NIC address value.
•	/
1	(14. (canceled)
	91
1	16. (amended) The data store of [claim 14] claim 15, wherein the NIC address
2	value that constitutes the current node-identifier value includes a signature portion and a
3	pseudorandomly generated portion.
	12
1	16. In a node on a network, a data store comprising:
2	(a) a plurality of machine-readable data structures accessible to a processor
3	in the node;
4	(b) each said data structure containing node-identification information for
5	the client node that includes (i) a current node-identifier value, and (ii) a former node-
5 6	the client node that includes (i) a current node-identifier value, and (ii) a former node-identifier value.

	1	17. The data store of claim 16, wherein the current node-identifier value is a NIC
	2	address value.
	1	11 19 18. The data store of claim 17, wherein the NIC address value comprises a signa-
V	2	ture portion and a pseudorandomly generated portion.
		. 7
	1	19. In a server node on a network, that includes a client node, a machine-readable
	2	data structure accessible to a processor in the server node, comprising a current NIC ad-
	3	dress value for the client node and a former NIC address value for the client node.
		·
	1	14 26. The machine-readable data structure of claim 19, wherein the current NIC ad-
1	=	
	2	dress value comprises a signature portion and a pseudorandomly generated portion.
